PROJECTS SUMMARY

◆ JavaScript Mini Applications

Technologies: JavaScript | HTML | CSS

A collection of self-developed mini web applications aimed at strengthening core front-end skills, including DOM manipulation, event handling, form validation, API integration, and responsive design.

- Developed interactive UI components with vanilla JavaScript, enabling real-time DOM updates and event-driven interactions.
- Integrated third-party APIs to fetch and dynamically display data based on user input.
- Implemented custom form validation using schema-driven rules and cross-field matching for data integrity.
- Managed application state in features like games, counters, and shopping carts to deliver accurate user feedback.
- Created reusable, modular functions and applied object-oriented principles for clean, maintainable code.
- Coordinated CSS animations with JavaScript for dynamic visual effects and responsive UI behavior.
- Applied event-driven programming handling keyboard, mouse, and transition events for smooth interactivity.
- Enhanced user experience through input validation, error handling, and interactive feedback.

◆ JavaScript & Java Coding Tasks

Technologies: JavaScript · Java

These are practice tasks I completed while learning JavaScript and Java. Through them, I developed a solid understanding of programming fundamentals, working with loops, conditions, arrays, objects, and strings.

What I learned:

- Basic syntax and structure of JavaScript and Java code
- Using if/else and switch statements for flow control
- Applying for and while loops for iteration and logic
- Working with associative arrays, lists, and objects
- Fundamentals of Object-Oriented Programming (OOP) in Java
- String manipulation and regular expressions
- Strengthened problem-solving and logical thinking skills

◆ Website & Landing Page Projects

During my journey learning HTML, CSS, and JavaScript, I built several projects including landing pages and simple websites that showcase various web design concepts and functionalities. Through these projects, I developed my skills in creating responsive and interactive web pages using modern technologies and best practices.

What I learned from these projects:

- HTML5 Semantic Structure — proper use of <header>, <nav>, <section>, <footer>, and other semantic elements for better SEO and accessibility.
- CSS Design and Responsiveness — linking external stylesheets, working with CSS variables, Flexbox and Grid layouts, media queries for adapting to different screen sizes.
- Working with Fonts and Icons — integrating Google Fonts and Remix Icon fonts for a professional look and clear visuals.
- JavaScript for Interactivity — implementing hamburger menus, dynamic class and icon toggling, DOM manipulation via getElementById and event listeners.
- Animations and UX — using ScrollReveal.js for smooth scroll-triggered animations and creating infinite scrolling effects by cloning DOM elements.

- Code Organization and Modularity — maintainable code with separated HTML, CSS, and JS files, well-structured projects.
- Basic SEO and Accessibility — correct use of <meta> tags and semantic HTML elements to improve ranking and user experience.

You can find these projects on my GitHub profile:

◆ **Portfolio Website** (Next.js + Tailwind CSS)

This is a fully responsive personal portfolio website built with Next.js and Tailwind CSS, designed to showcase my skills, services, and selected projects in a modern and user-friendly way.

- Built a fully responsive personal portfolio using Next.js and Tailwind CSS
- Structured reusable React components like About, Work, Contact, and Navbar
- Implemented clean UI with Tailwind utility classes and responsive design principles
- Practiced modern project folder organization and layout structuring in Next.js
- Gained experience with JSX syntax and props for component-based development
- Learned how to configure and use tools like PostCSS, tailwind.config.js, and next.config.mjs

◆ **Sass Projects**

Description:

A set of exercises and mini projects for practicing SCSS (Sass) features.

Key Learnings:

- Variables for consistent colors, fonts, and spacing.
- Mixins for reusable media queries and style patterns.
- Nesting for clean and structured code.
- Imports & partials for modular organization.
- Extends to avoid repetitive CSS.
- Responsive layouts with CSS Grid and Flexbox using SCSS.

GitHub: <https://github.com/Jelenallic333/SCSS.git>

◆ **React Projects**

Description:

Small React applications focused on practicing components, props, state, and event handling.

Key Learnings:

- React-app → Learned project setup, JSX basics, and component structure.
- React-stopwatch-app → Practiced state management and working with timers/events.
- React-to-do-list → Built CRUD functionality (add, delete tasks) with state and props.
- React-color-picker → Practiced event handling and dynamic UI updates.

GitHub: <https://github.com/Jelenallic333/React-app.git>

◆ **PHP Projects**

Description:

Practical PHP applications with database integration and basic backend logic.

Key Learnings:

- T-shop → Built a fully functional online store using PHP, MySQL, Bootstrap (product pages, cart, responsive design).

Link: T-shirt-shop.kesug.com

- Gym-App → Learned admin dashboard development for managing content, users, and schedules.

Link: appGym333.rf.gd

- Social-Network → Practiced user authentication, posts, and file uploads (profile pictures).

Link: Network333.free.nf

GitHub: <https://github.com/Jelenallic333/PHP-projects.git>

◆ **Skills & Tools**

Languages & Frameworks: JavaScript, Java, PHP, HTML, CSS, React, Next.js, Tailwind CSS, SQL

Development Tools & Platforms: Git & GitHub, Vercel, XAMPP, Trello, VS Code

Web Development Skills: Responsive design, DOM manipulation, API integration, interactive web apps

◆ **Languages**

Serbian (native) | English (intermediate)
